TRANSPORTATION

The Leviathan Platform tour allowed Noble Energy employees and one guest to take an exclusive tour of the platform before it was transported offshore near Israel.

Coterie Spark was engaged one month prior to the event and managed the coordination of transportation, tenting, rentals/decor, generators, portable cooling units, food and beverage, audio/visual, entertainment and signage. Due to the tight project timeline and its remote location, conducting multiple site visits and finding vendors that were able to service this event was challenging. This event had strict safety requirements for vendors, staff & attendees as the event took place in an active workyard. Verifying insurance, sourcing personal protective equipment and close supervision were required.

Coterie Spark started by designing advanced documentation, instructions and communication for vendors, safety trainers, tour guides and bus leads. Detailed timelines and protocols were created to ensure that the event ran on schedule and most importantly, safely.

9 buses were carefully timed to transport guests to and from Houston to Ingleside, TX. Breakfast was provided prior to attendees boarding the buses, which were equipped with beverages, snacks, and thoughtful gifts to provide entertainment. Once in Ingleside, 25 tour groups were scheduled to visit 20 stations at a strategically timed pace in and around the platform. It was imperative that groups did not overlap or overcrowd a station as this would create a safety hazard. When guests were not on the tour, they enjoyed entertainment, food and beverages in a comfortable environment.
